How to enable task manager and Windows registry tools

HOW TO ENABLE TASK MANAGER

There are situations when the **Task Manager** gets disabled by malware programs. In order to enable task manager please follow the steps below:

1. Download the [enabletaskman.zip](#) file to your computer.
2. Once downloaded, extract the contents to its own folder.
3. Go to that folder and double click on the **enabletaskman.bat** file.

Now you should have access to **Task Manager**.

HOW TO ENABLE REGISTRY TOOLS

If a malware program has disabled the Windows registry editors (**Regedt32.exe** and **Regedit.exe**) you can regain the access by following the steps below:

1. Click on the **Start** button, select **Run** and write: **gpedit.msc**
2. Navigate to User Configuration, Administrative Templates, System. You should see the option:
[Prevent access to registry editing tools](#)
3. Double click on the *Prevent access to registry editing tools*, select the **Disabled** option and click on the **OK** button.

Now you should have access to the Windows registry tools.
